Apace Advantages

vStor, eStor, cStor and vShare

August 2005

Apace vs. Editshare

- Performance: vStor does 6-8 streams of 1:1 SD or 40+ DV/HDV
- Wide editing software support: Avid, FCP, Adobe Premiere, Canopus, Sony Vegas, Pinnacle…
- Wide product mix: eStor for rendering, graphics, effects, and animation
- Avid media file sharing
- Mac OS support for both Avid and FCP
- vShare for uncompressed HD/2k/4k sharing
- System redundancy for better reliability (no single drive failure caused downtime)

- Editshare's 20 DV/HDV
- Doesn't support Mac OS for Avid nor FCP – frame drop frequently.
- No hybrid support for different editing software (no legacy carry-on nor future migration path)
- System drive failure will cause system downtime
